LEFI SHAN

Legal name: Kevin Shan | TECHNICAL GAME DESIGNER

Los Angeles, CA | +1 626 693-4003 | leficious@gmail.com | LinkedIn | itch.io
Portfolio: leficious.com/ | Watch reel

Technical game designer building combat, gameplay systems, and spatial puzzle prototypes in Unreal Engine 5 and Unity 6, with an emphasis on animation timing, enemy behavior, and playable encounter flow.

SELECTED TECHNICAL DESIGN PROJECTS

An Echo Has No Shape | Play on itch.io | Trailer — 2026

Solo 4-week Unity 6 prototype | C# gameplay systems, level design, and sightless wayfinding

- Built a continuous 550m × 550m sightless acoustic labyrinth around a single echolocation input (Press E) connecting a central hub and three regional puzzles with zero HUD markers, minimaps, or loading screens.
- Implemented three regional C# echo-state rulesets: probabilistic Siren signal interference (7s cycle), sequential 4-stage city memory synthesis with 45 m/s boundary resets, and a 3.0s forest silence threshold with 0.35s active wave overwrite.

Fallen Valkyrie — 2025

Solo 10-week UE5 prototype | Third-party character, environment, and source animation assets

- Designed a playable boss stage around spear and bow combat, weapon-dependent lock-on targeting, resources, and dot-product directional hit reactions; progression gates and phase changes shape its pacing.
- Implemented weapon-specific animation states, Anim Notify attack windows, Motion Warping, and reusable StateTree tasks; a mid-fight aerial phase adds projectile and summon pressure.

Grid-Based Tactical RPG Template — 2026

Solo UE5 systems prototype | Blueprint and UMG tools

- Implemented a snappable grid, A* pathfinding, Dijkstra movement ranges, and path previews so movement costs are visible before a move is committed.
- Built a UMG grid-authoring and debugging tool with reusable data and Animation Blueprint templates for units, classes, equipment, and attributes.

Starshore — 2025

Solo 15-week UE5 prototype | Third-party character and environment assets

- Built standard and flight locomotion, dash movement, and a five-hit combo; double-tap forward enters flight and release or interruption returns to standard movement.
- Designed passive spell targeting to hold a target within 750 units and a 45-degree camera cone; connected GAS abilities, data-driven loot, inventory, and vendors into one playable loop.

ADDITIONAL TECHNICAL WORK

Stylize Normals Toolkit — 2025-26

Python and Maya API | Open-source tool

- Developed a multi-object Maya workflow for generating, transferring, previewing, inspecting, and repairing custom vertex normals, with live comparison and one-step undo.

EDUCATION

University of Southern California | M.S., Game Design and Development | Expected 2028

Gnomon School of Visual Effects | B.F.A., Digital Production - Games (Featured in Student Reel) | 2025

TOOLS AND SKILLS

Gameplay & Design: Unreal Engine 5 (Blueprints, GAS, StateTree, Behavior Trees, Enhanced Input, UMG), Unity 6 (C#, URP), data-driven systems, combat & level design

Animation & Code: Animation Blueprints, state machines, Motion Warping, Anim Notifies, retargeting, C#, Python, Maya API, C++, Git, Perforce
